

Demolition

For over 20 years KKB has provided demolition services and built a reputation for professionalism, quality and added value. We undertake demolition of all types of building from residential properties to offices, public sector and industrial buildings.

We can also integrate other services from the KKB Group to offer a complete, end-to-end solution which includes site establishment, service disconnections and redirections, asbestos removal, temporary works, soft-strip,

structural demolition, land remediation and any associated groundworks to deliver the site ready for redevelopment.

Our dedicated, experienced management team have the expertise and knowledge to provide guidance and assistance to our clients throughout the process from early stage planning to completion on-site and beyond.

All of our demolition services are conducted in full compliance with our integrated health and safety, quality and environmental

management systems which is certificated against ISO 45001, ISO 9001 and ISO 14001. We use controlled methodologies to enable us to safely deconstruct and dismantle structures and the company is a member of the National Demolition Training Group (NDTG) which ensures our operatives receive the most up-to-date training allowing them to carry out their works to the very highest standards.

Sustainability is a key issue for the construction sector and we have developed sophisticated systems to control emissions of dust, noise, vibration and fumes to minimise disturbance, disruption and health consequences to the local community and ecology.

Meticulous planning of logistics and use of hybrid plant minimises the carbon footprint of our activities. We also implement procedures for collecting, segregating and recycling waste streams generated by demolition including the crushing and screening of concrete and hardcore wastes to produce recycled aggregates for re-use in the build phase.
